

**CLASS VII**  
**HOLIDAY HOME WORK**

**Global warming (Project work)**

- As you can feel that the level of Carbon Dioxide has been increasing in the atmosphere due to the factory smoke, car fumes. The heat retained is increasing the temperature of the earth. This rise in temperature is causing the snow in the coldest parts of the world like the antartica..to melt. As a result the sea level is rising causing floods in the coastal areas. There are drastic changes in the climate of a place leading to extinction of some plants and animals. There is temperature variations and the seasons are changing drastically.
- Humans have been cutting down trees and forests which also is adding up to the natural disasterslike land slides and cloud burst.
- What should be done to slow down this process of global warming and free environment.
- You can collages, charts, scrap files and a lot of search work from the net.

Or

Different roles played by Indian women
